

## PVS TV Systems Programmable Handset Interface

### PVS PVTV03

The PVS PVTV03 wall-plate is designed to interface the Curbell Gen4 range of handsets to just about any existing or new nurse-call and television system.

It offers 2 x over-bed light outputs, with selectable toggle/momentary function, as well as a nurse call trigger output – all of which can be selected to offer active high or low outputs.

A range of TV control methods are available, and if used with a compatible TV your clients can have the benefit of the extra and useful functions of the Gen4.

Configurable handset pull-out is also offered as standard, and the availability of two light control outputs allows flexible control options for patients.
